

SUMIT KUMAR

Software Engineer - Frontend | React.js | Next.js | TypeScript
Gurugram, India | +91-8292359259 | sumkumar723@gmail.com | [LinkedIn](#) | [GitHub](#)

PROFILE

Frontend Engineer with 3 years of production experience building React and Next.js applications. Sole frontend engineer at a product-focused SaaS studio, owning architecture, performance, and full delivery across 10+ live applications. Specialise in scalable component systems, real-time feature engineering, and measurable performance improvements. Looking to join a product-first engineering team where I can own the frontend at scale.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript

Frontend: React.js, Next.js, Redux Toolkit, React Query, HTML5, CSS3, Tailwind CSS, SCSS

Performance: Core Web Vitals, Code-splitting, Lazy loading, Memoisation, Webpack, Caching

Testing: Jest, React Testing Library

Tools: Git, GitHub Actions, Docker, Postman, Chrome DevTools, Azure DevOps

Core CS: Data Structures & Algorithms, OOP

EXPERIENCE

Software Engineer - Frontend | [Studio Graphene Pvt Ltd](#)

Oct 2023 – Present | Gurugram, India

Sole frontend engineer — owned architecture, technical decisions, and full delivery across all client SaaS products.

- **Design System:** Architected a 50+ component library from scratch using React and TypeScript, establishing coding standards that reduced feature build time by 40% across all product codebases.
- **Performance:** Reduced JS bundle from ~2.1MB to ~1.4MB via code-splitting and Webpack optimisation. Engineered real-time AI chat using SSE streaming, cutting connection latency from ~800ms to ~440ms.
- **State Architecture:** Designed a Redux Toolkit state layer with a custom hooks abstraction across 4+ codebases, consolidating API logic and removing ~800 lines of duplicate CRUD code.
- **API Integration:** Led end-to-end REST API integration across multiple products, defined TypeScript data contracts with backend teams, and ensured type-safe frontend-backend delivery.
- **CI/CD and Quality:** Owned GitHub Actions pipelines, maintained Jest unit test coverage, and enforced thorough code reviews — zero critical production bugs across all client deployments.
- **Cross-domain Delivery:** Delivered production frontend across 4+ client domains including SaaS, AI, and analytics products — managing full ownership from requirement gathering to deployment as the sole frontend engineer.

PROJECTS

Pulse — Engineering Analytics Platform | *React, Next.js, TypeScript, Redux Toolkit, React Query, REST APIs*

- Built a full-scale developer metrics dashboard with real-time data visualisations, complex CRUD flows, and a natural language AI query interface (Pulse AI) — Jira and GitHub Insights in scope.
- Cut redundant API calls by 50% using React Query caching and reduced re-renders by 45% via memoisation and selective context splitting, measurably improving dashboard responsiveness.
- Built Pulse AI — an AI-powered assistant enabling natural language queries on engineering metrics, giving non-technical stakeholders real-time project and developer performance insights without writing a single query.

AutoOrder AI — Voice-Based Ordering App | *React, Next.js, OpenAI, Web Speech API, Redux Toolkit, REST APIs*

- Built an AI-powered voice ordering app with a two-stage NLP retrieval pipeline, live third-party API integration, and automated payment selection using Web Speech API and OpenAI.
- Improved order completion rate by 40-55% through streamlined voice-to-action UX, robust error handling, and progressive fallback states for low-confidence speech inputs.

ACHIEVEMENTS

LeetCode 1500+ rating | **600+ problems solved** | **Coding Ninjas Champion (5000+ pts)**

Consistent algorithmic practice maintained alongside 3 years of full-time production engineering.

EDUCATION

B.Tech, Electronics and Communication Engineering | Gurukula Kangri University, Haridwar 2019 – 2023 | CGPA 8.0/10
